

3stepIT Security Policy

3stepIT is in business of providing customers with efficient, sustainable, and secure lifecycle management services.

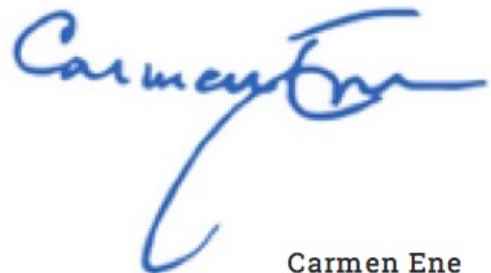

3stepIT continuously works on protecting business', customers', and shareholders' interests.

3stepIT implements security measures aiming at balancing risk exposure, business value, vulnerabilities, and threats.

We, in 3stepIT, aim to control, facilitate, and implement well-balanced security measures throughout our operations. Security measures normally are a combination of appropriate proactive and reactive controls. The former among other things include security and risk awareness, policies, access control, etc. The latter is about ability to respond to, and recover from incidents and unforeseen changes in environments.

Our Information Security Management System (ISMS) implementation is based on of ISO/IEC 27001:2013. We are committed to:

- Ensuring that customers' expectations and business agreements are met
- Protecting our shareholders' value, company's assets and investments
- Ensuring that business strategies and objectives are not jeopardized due to security risks
- Complying with local laws, regulations, and ethical standards wherever we operate
