Quality and Environmental Policy

3 Step IT is in business to provide customers with efficient and sustainable technology lifecycle management services.

We base our business on the principles of the circular economy, and strive to operate ever more sustainably. Our IT lifecycle management products and services ensure that returned IT-equipment is reused, or if that is not possible, responsibly recycled.

We aim to assure and continually improve customer satisfaction by developing our products and services based on customer feedback, as well as stakeholder needs and expectations generally.

Company-wide processes and procedures for quality and sustainability commit us to continual improvement by setting targets, educating employees, measuring our performance and communicating it to our stakeholders in an open, honest and timely manner.

We cooperate closely with our customers and stakeholders, and we participate in sustainability forums and other initiatives to share, develop and implement industry specific best practices.

Our management system is based on implementation of ISO 9001:2015 and ISO 14001:2015. We are committed to comply with local laws and regulations wherever we operate. Our environmental management system ensures we pay active attention to the use of raw materials, consumption of energy, prevention of pollution and climate change mitigation.

Carmen Ene

Chief Executive Officer

Document Control Data

Owner: CEO
