

Single Sign-On

Single sign-on (SSO) service is available for 3 Step IT's asset management system - Asset NG. Instead of using Asset NG's specific username and password, the SSO enables users to login to Asset NG with authentication of your identity provider (IdP) e.g. Active Directory.

THE BENEFITS OF SSO

SSO login to Asset NG increases security and reduces costs for your IT department as usernames and passwords are managed in one place. It eliminates user barrier to access Asset NG by lowering password fatigue and relieve end-users from memorising separate credentials.

HOW IT WORKS

The technical communication between Asset NG and your IdP service can be setup using Security Assertion Markup Language (SAML) version 2. For the SSO, a custom Asset NG subdomain is created for your customer account. When a user access Asset NG via this subdomain, it recognises the user's origin and forward the authentication request to your IdP service. The IdP service identifies the user and send back a response, based on which, Asset NG can decide whether or not to login the user.

This service is available to 3 Step IT's customers, contact us to request the service.
